FUNCTION: The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity.

SUBCELLUTAR LOCATION: Secreted.

SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     POTENTIAL.

Proc. Natl. Acad. Sci. U.S.A. 89:8913-8917(1992).
-!- FUNCTION: The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity.
-!- SUBCELLUTAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Proc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Isolation of an insulin-like growth factor II cDNA from guinea pig
liver: expression and developmental regulation.";
Mol. Cell. Endocrinol. 89:105-110(1992).
-!- FUNCTION: The insulin-like growth factors possess growth-promoting
activity. In vitro, they are potent mitogens for cultured cells.
IGF-II is influenced by placental lactogen and may play a role in
fetal development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ETLCGABLVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMYCA

Tocordinate expression of insulin-like growth factor II and its

receptor during muscle differentiation.";

Proc. Natl. Acad. Sci. U.S.A. 86:154-1547(1989).

I. PUNCTION: The insulin-like growth factors possess growth-promoting activity. In vitro, they are potent mitogens for cultured cells.

IGF-II is influenced by placental lactogen and may play a role in fetal development.

-!- SUBCELLULAR LOCATION: Secreted.

-!- SUBCELLULAR LOCATION: Secreted.

-!- DEVELOPMENTAL STAGE: Low levels of expression during myoblast proliferation. Levels rise rapidly during myoblast differentiation and then decrease.

-!- SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. -!- FUNCTION: The insulin-like growth factors possess growth-promoting activity. In vitro, they are potent mitogens for cultured cells.
IGF-II is influenced by placental lactogen and may play a role in fetal development.

Broblution of the insulin gene superfamily. Sequence of a preproinsulin-like growth factor cDNA from the Atlantic hagfish.";
J. Biol. Chem. 266:2397-2402(1991).
I. FUNCTION: The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity.
I. SUBCELLULAR LOCATION: Secreted.
I. SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-MAY-1991 (Rel. 18, Created)

The isolation, purification and amino-acid sequence of insulin from the teleost fish Cottus scorpius (daddy sculpin).";
Eur. J. Biochem. 158:117-123(1986)
-i- FUNCTION: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver.
-:- SUBUNIT: Heterodimer of a B chain and an A chain linked by two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Myoxocephalus scorpius (Shorthorn sculpin) (Daddy sculpin).

-!- PUNCTION: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver.

-!- SUBUNIT: Heterodimer of a B chain and an A chain linked by two
                                                                                                                                                                                                                                                                                                                                                                             Gadus callarias (Baltic cod).

"Species variation in the amino acid sequence of insulin.";
"Species variation in the amino acid sequence of insulin.";
Am. 0. Med. 40:662-666(1966).
-!- FUNCTION: Insulin decreases blood glucose concentration. It
increases cell permeability to monosaccharides, amino acids and
fatty acids. It accelerates glycolysis, the pentose phosphate
cycle, and glycogen synthesis in liver.
-!- SUBUNIT: Heterodimer of a B chain and an A chain linked by two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Species variation in the amino acid sequence of insulin.";
Am. J. Med. 40:662-666(1966).
-!- FUNCTION: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver.
-!- SUBDNIT: Heterodimer of a B chain and an A chain linked by two disulfide bonds.
Insulin 1.
Batrachoididae sp. (Toadfish).

"The relation of conformation and association of insulin to receptor
binding; X-ray and circular-dichroism studies on bovine and
hystricomorph insulins.";

Bur. J. Biochem. 55:531-542(1975).
I. FUNCTION: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver.
SUBJUIT: Heterodimer of a B chain and an A chain linked by two disulfide bonds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chinchilla brevicaudata (Chinchilla).

Title: A novel human insulin-like growth factor I messenger RNA is expressed in normal Reference number: A36552; MUID:91187000; PMID:2082190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nsulin-like growth factor I precursor, splice form A [validated] - human
Alternate names: IGF-I long splice form precursor; IGF-IA; somatomedin C
Specials: Homo sapiens (man)
Date: 24-Apr-1984 #sequence revision 30-Jun-1987 #text change 31-Dec-2000
Accession: A92581; A23614; A33321; JT0571; A23622; A92226; A60483; S30519; A48960; IS7
